

TITLE

PLANT DIACYLGLYCEROL ACYLTRANSFERASES

ABSTRACT OF THE DISCLOSURE

This invention relates to an isolated nucleic acid fragment encoding a diacylglycerol  
5 acyltransferase. The invention also relates to the construction of a chimeric gene encoding all or a  
portion of the diacylglycerol acyltransferase, in sense or antisense orientation, wherein expression  
of the chimeric gene results in production of altered levels of the diacylglycerol acyltransferase in a  
transformed host cell.
